## **BURDA BLUETOOTH APP STEP BY STEP**

## Introduction

- The app can be downloaded for all Android and iOS devices and is free of charge.
- You can regulate up to eight radiators per app.
- In the app, you can name each heater.
- The heat regulation is infinitely variable
- The range of the app is 50m and needs no visual contact.
- In the app you can set a tilt sensitivity, where you can adjust how far a radiator can move before it is switched off automatically. At 0% the tilt sensitivity is off and the radiator always remains on and at 100% the tilt sensitivity is on and the radiator turns off with minimal movement.
- In addition, the app has a timer where you can set a time at which the radiator is automatically turned off. The timer can be set individually for each heater.

- 1. On the first page you can choose the heaters you want to control (activate)
- 2. If you use the application for the first time you have to rename it
- If you have more than one heater you want to control you can connect them to the application in this step

- 4. You will be able to assign the password for the heater you have chosen
- 5. The password of the heater will be saved for the future
